## What is Light Architecture?

We practise Light Architecture. A term coined in the early part of the 20th Century, Light Architecture describes the use of electric light in changing the perception of built form and space. For the 21st Century, our practice has evolved our approach to consider how natural and artificial light combine to improve the experience of the built environment, promoting well-being and generating a unique sense of place. We draw on a wide array of technologies and techniques to maximise the possibilities while minimising energy use and environmental impact.

## Who are we?

We are an independent, award-winning international design practice that uses light and darkness to enhance the visual environment. Over more than twenty-five years we have completed hundreds of projects around the world ranging from lighting masterplans to pocket parks, major civic buildings to small community spaces; from airports and bridges to cathedrals and monuments. We have helped to shape our profession and set a global benchmark for excellence.

We balance imagination with realism, passion with pragmatism. Through careful collaboration between our multidisciplinary design team, clients and design partners, we ensure that solutions are sustainable and easy to manage. Our projects reveal buildings and spaces in ways that are new, unexpected, and completely integrated – light architecture in its truest sense.
