

Charlotte studied architecture at Newcastle University, graduating with honours. Her interest in light was sparked during her studies when she realised how light is integral to all elements of design: it is key to successful architectural design and is inseparable to the spaces we inhabit.

Charlotte joined Speirs + Major in 2018 as an Assistant Designer and has since worked on the Battersea Power Station, a residential development in Tottenham Hale, and a large new airport terminal in Singapore. She is especially enjoying the challenge of working on individual aspects of a larger design, and having to consider how each design links together to create a whole.

Outside of work, Charlotte has a passion for fashion design. She likes going to art exhibitions and enjoys balancing gym classes, group sports, exploring London's cultural scene and travelling to new places abroad.
