

Martin graduated from an Architecture degree from Federico II in Naples before completing his Masters in Advanced Architecture at the IAAC in Barcelona, where his master thesis focused on digital tectonics.

Martin has always believed that light can completely change the perception of a space, and is an essential element in any project.

In 2014 he joined Speirs + Major to further explore the relationship between light and architecture. His skills in 3D Modelling and CGI make him an ideal visualiser, and since joining he has assisted on projects such as Norwich Cathedral, the Barangaroo development in Sydney, Australia and a number of confidential high profile developments in London.

Martin is a member of the ARB and RIBA. He has a love for travelling and photography and likes to combine these two passions as often as possible.
