

Veronica studied Product and System Design Engineering at the University of Aegean, Greece, before further study in Product Design at the Edinburgh College of Arts. She completed her postgraduate thesis regarding the effects of circadian rhythm, which sparked both her interest in light and desire to work in lighting design.

Veronica joined Speirs + Major in 2019 after working in the lighting industry, both with manufacturers and designers, for 4.5 years. She has since worked on the Battersea Power Station development, the London headquarters for a financial institution and the refurbishment of a historical residential block in Marylebone. She is especially interested in the more creative aspects of working with light and would like to apply these to art galleries and museums in the future.

Outside of work, Veronica has a passion for contemporary dance and aerial arts. She speaks Greek and English fluently.

**Veronica Lykou**  
**Project Designer**  
BSc, MEng (Hons), MA (Hons)
